

The LANXESS Virkon™ 360° Approach to Biosecurity Disease Prevention & Control

Clinical, sub-clinical and emergency disease challenges are a sustained constant global threat to livestock, poultry and aquaculture production.

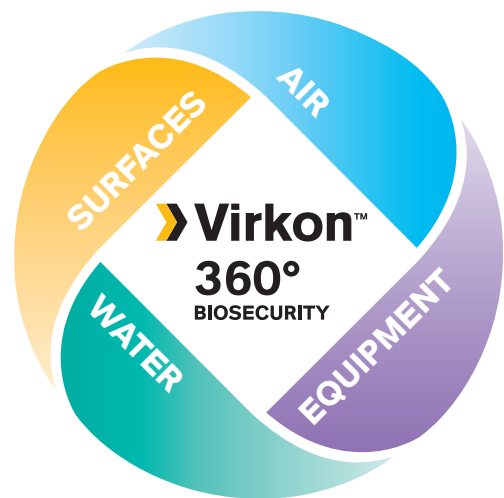

Producers and farmers need to be able to implement a fully integrated continuous disease prevention and control biosecurity programme to help prevent the introduction of pathogens onto and around their production site / farm.

In order to achieve the best disease control management results they need a proven set of biosecurity tools that will help to address every aspect and disease transmission vector on their facility / farm.

Each LANXESS Virkon™ disinfectant solution has been scientifically formulated to address specific biosecurity tasks, ensuring robust and powerful efficacy, and application flexibility that global producers and farmers can trust.

The LANXESS Virkon™ 360° approach to biosecurity best practice addresses every aspect of modern livestock, poultry and aquaculture production routine biosecurity and emergency outbreak situations:

- Surfaces
- Equipment
- Air
- Drinking Water
- Transport

Cleaning – An Essential 360° Biosecurity Task

For a disinfection biosecurity programme to work to its full potential it is necessary to comprehensively clean before disinfecting.

LANXESS Biosolve™ HD and Biosolve™ heavy-duty cleaning concentrate detergents have been scientifically engineered to address specific cleaning tasks associated with animal farming, livestock & aquaculture production, hatchery and food processing applications.

Whether it's mineral & scale build-up, caked-on organic matter, animal fats and oils, or residues from other detergent products, LANXESS Biosolve™ heavy-duty detergent solutions are an essential element of the Virkon™ 360° approach to biosecurity.
